

Red Imported Fire Ant

Solenopsis invicta
Family: Formicidae
predator • mutualist

Honeydew Mutualism: Protect Aphids in your plot. Each time those Aphids feed successfully, Fire Ants gain +1 Population.

Hunt: Take Monarchs, Carpenter Bees, Assassin Bugs, or Parasitoid Wasps. Fire Ants +1 Population; prey -1 Population.

Ants stop Assassin Bugs and Parasitoid Wasps from hunting protected Aphids.

Red Imported Fire Ant

Solenopsis invicta
Family: Formicidae
predator • mutualist

Honeydew Mutualism: Protect Aphids in your plot. Each time those Aphids feed successfully, Fire Ants gain +1 Population.

Hunt: Take Monarchs, Carpenter Bees, Assassin Bugs, or Parasitoid Wasps. Fire Ants +1 Population; prey -1 Population.

Ants stop Assassin Bugs and Parasitoid Wasps from hunting protected Aphids.

Brown Anole

Anolis sagrei
Family: Dactyloidae
predator

Hunt: Take any insect anywhere in the garden. Anole +1 Population; prey -1 Population.

Ignore Ant Protection: Brown Anoles may hunt Aphids even when Fire Ants protect them.

At 0 Population, prey enters Compost face up. Activate once per round.

Brown Anole

Anolis sagrei
Family: Dactyloidae
predator

Hunt: Take any insect anywhere in the garden. Anole +1 Population; prey -1 Population.

Ignore Ant Protection: Brown Anoles may hunt Aphids even when Fire Ants protect them.

At 0 Population, prey enters Compost face up. Activate once per round.

Aphids

Aphis spp.
Family: Aphididae
herbivore

Feed: Use Milkweed, Mistflower, Bluebonnet, or Sunflower. Aphids +1 Population; plant -1 Population.

Honeydew Mutualism: When these Aphids feed successfully, Fire Ants in the same plot also gain +1 Population.

Those ants block Assassin Bugs and Parasitoid Wasps, but not Anoles or Wrens.

Aphids

Aphis spp.
Family: Aphididae
herbivore

Feed: Use Milkweed, Mistflower, Bluebonnet, or Sunflower. Aphids +1 Population; plant -1 Population.

Honeydew Mutualism: When these Aphids feed successfully, Fire Ants in the same plot also gain +1 Population.

Those ants block Assassin Bugs and Parasitoid Wasps, but not Anoles or Wrens.

Aphids

Honeydew Mutualism: When these Aphids feed successfully, Fire Ants in the same plot also gain +1 Population.

Those ants block Assassin Bugs and Parasitoid Wasps, but not Anoles or Wrens.

Texas Bluebonnet

Lupinus texensis
Family: Fabaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Pollination: A Carpenter Bee may visit. Both bee and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Texas Bluebonnet

Lupinus texensis
Family: Fabaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Pollination: A Carpenter Bee may visit. Both bee and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Texas Bluebonnet

Lupinus texensis
Family: Fabaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Pollination: A Carpenter Bee may visit. Both bee and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Drought

Effect

Remove 1 Water from every plant that has any. Return lost Water to the supply.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

Effect cards never score points.

Heat Wave

Effect

Remove 1 Water from every plant that has any. Then one of your plants with Water left gains +1 Population, up to its maximum.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

Effect cards never score points.

Turkey Tail Fungus

Trametes versicolor

Family: Polyporaceae
decomposer • fungus

Decompose: Turn 1 face-up organism in Compost face down on bottom. Give one of your plants +1 Population.

Always Playable: A decomposer may enter your plot even when no food or prey is present.

Enter with 1 Population; maximum 3. Activate once per round.

Turkey Tail Fungus

Trametes versicolor

Family: Polyporaceae
decomposer • fungus

Decompose: Turn 1 face-up organism in Compost face down on bottom. Give one of your plants +1 Population.

Always Playable: A decomposer may enter your plot even when no food or prey is present.

Enter with 1 Population; maximum 3. Activate once per round.

Aquatic Milkweed

Asclepias perennis

Family: Apocynaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Host Plant: Monarch caterpillars feed only on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Pollinators: Monarch, Carpenter Bee. Herbivores: Monarch, Aphids.

Aquatic Milkweed

Asclepias perennis

Family: Apocynaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Host Plant: Monarch caterpillars feed only on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Pollinators: Monarch, Carpenter Bee. Herbivores: Monarch, Aphids.

Aquatic Milkweed

Asclepias perennis

Family: Apocynaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Host Plant: Monarch caterpillars feed only on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Pollinators: Monarch, Carpenter Bee. Herbivores: Monarch, Aphids.

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Host Plant: Monarch caterpillars feed only on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Pollinators: Monarch, Carpenter Bee. Herbivores: Monarch, Aphids.

Mulch

Effect

Choose one of your plants. Hot-day evaporation does not remove Water from it until your next turn.

Keep Mulch under that plant until your next turn, then put it face down on Compost's bottom.

Effect cards never score points.

Eastern Carpenter Bee

Xylocopa virginica

Family: Apidae

pollinator

Generalist Pollinator: Visit any flowering plant in the garden. Bee and plant each gain +1 Population.

Population Limit: Neither the bee nor its plant partner may gain Population above its maximum.

Activate once per round. Play only if a flowering plant is present.

Eastern Carpenter Bee

Xylocopa virginica

Family: Apidae

pollinator

Generalist Pollinator: Visit any flowering plant in the garden. Bee and plant each gain +1 Population.

Population Limit: Neither the bee nor its plant partner may gain Population above its maximum.

Activate once per round. Play only if a flowering plant is present.

Eastern Carpenter Bee

Xylocopa virginica

Family: Apidae

pollinator

Generalist Pollinator: Visit any flowering plant in the garden. Bee and plant each gain +1 Population.

Population Limit: Neither the bee nor its plant partner may gain Population above its maximum.

Activate once per round. Play only if a flowering plant is present.

Frogfruit

Phyla nodiflora

Family: Verbenaceae

plant · flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Drought Tolerant: On a Hot day, Frogfruit keeps its stored Water instead of losing 1.

Pollinators: Monarch Butterfly and Eastern Carpenter Bee.

Frogfruit

Phyla nodiflora

Family: Verbenaceae

plant · flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Drought Tolerant: On a Hot day, Frogfruit keeps its stored Water instead of losing 1.

Pollinators: Monarch Butterfly and Eastern Carpenter Bee.

Frogfruit

Phyla nodiflora
Family: Verbenaceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population.
Repeat while able, up to the maximum.

Drought Tolerant: On a Hot day, Frogfruit keeps its stored Water instead of losing 1.

Pollinators: Monarch Butterfly and Eastern Carpenter Bee.

Blue Mistflower

Conoclinium coelestinum
Family: Asteraceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population.
Repeat while able, up to the maximum.

Pollination: A Monarch or Carpenter Bee may visit.
Both pollinator and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Blue Mistflower

Conoclinium coelestinum
Family: Asteraceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population.
Repeat while able, up to the maximum.

Pollination: A Monarch or Carpenter Bee may visit.
Both pollinator and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Blue Mistflower

Conoclinium coelestinum
Family: Asteraceae
plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population.
Repeat while able, up to the maximum.

Pollination: A Monarch or Carpenter Bee may visit.
Both pollinator and plant gain +1 Population.

Aphids may feed here: Aphids +1 Population; plant -1 Population.

Pesticide Spray

Effect

Choose one Garden Plot. Every insect there loses 1 Population. Return lost counters to the supply.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

At 0 Population, organism cards enter Compost face up.

Milkweed Assassin Bug

Zelus longipes
Family: Reduviidae
predator

Hunt: Take Aphids, Monarchs, Carpenter Bees, or Parasitoid Wasps anywhere. Assassin Bug +1 Population; prey -1 Population.

Ant Protection: Cannot hunt Aphids protected by Red Imported Fire Ants.

At 0 Population, prey enters Compost face up. Activate once per round.

Milkweed Assassin Bug

Zelus longipes
Family: Reduviidae
predator

Hunt: Take Aphids, Monarchs, Carpenter Bees, or Parasitoid Wasps anywhere. Assassin Bug +1 Population; prey -1 Population.

Ant Protection: Cannot hunt Aphids protected by Red Imported Fire Ants.

At 0 Population, prey enters Compost face up. Activate once per round.

Monarch Butterfly

Danaus plexippus
Family: Nymphalidae
pollinator • herbivore

Pollinate: Visit Milkweed, Frogfruit, Mistflower, or Sunflower. Monarch and plant each gain +1 Population.

Caterpillar Feeding: Feed on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Choose one action per activation.

Monarch Butterfly

Danaus plexippus
Family: Nymphalidae
pollinator • herbivore

Pollinate: Visit Milkweed, Frogfruit, Mistflower, or Sunflower. Monarch and plant each gain +1 Population.

Caterpillar Feeding: Feed on Milkweed. Monarch +1 Population; Milkweed -1 Population.

Choose one action per activation.

Choose one action per activation.

Rainstorm

Effect

Give every plant +1 Water, up to its 3-Water cap. Return any excess to the supply.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

Effect cards never score points.

Rainstorm

Effect

Give every plant +1 Water, up to its 3-Water cap.
Return any excess to the supply.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

Effect cards never score points.

Carolina Wren

Thryothorus ludovicianus

Family: Troglodytidae

predator

Hunt: Take any insect or Brown Anole anywhere.
Wren +1 Population; prey -1 Population.

Ignore Ant Protection: Carolina Wrens may hunt Aphids even when Fire Ants protect them.

At 0 Population, prey enters Compost face up. Activate once per round.

Carolina Wren

Thryothorus ludovicianus

Family: Troglodytidae

predator

Hunt: Take any insect or Brown Anole anywhere.
Wren +1 Population; prey -1 Population.

Ignore Ant Protection: Carolina Wrens may hunt Aphids even when Fire Ants protect them.

At 0 Population, prey enters Compost face up. Activate once per round.

Aphid Parasitoid Wasp

Lysiphlebus testaceipes

Family: Braconidae

predator • parasitoid

Parasitize: Hunt Aphids anywhere in the garden.
Wasp +1 Population; Aphids -1 Population.

Specialist: Cannot hunt other organisms or Aphids protected by Red Imported Fire Ants.

At 0 Population, prey enters Compost face up. Activate once per round.

Aphid Parasitoid Wasp

Lysiphlebus testaceipes

Family: Braconidae

predator • parasitoid

Parasitize: Hunt Aphids anywhere in the garden.
Wasp +1 Population; Aphids -1 Population.

Specialist: Cannot hunt other organisms or Aphids protected by Red Imported Fire Ants.

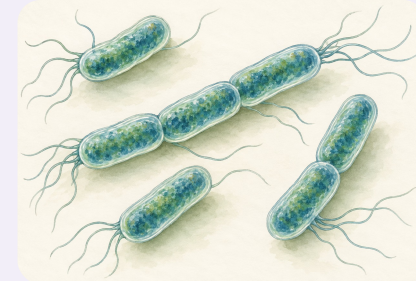

At 0 Population, prey enters Compost face up. Activate once per round.

Soil Bacterium

Bacillus subtilis

Family: Bacillaceae

decomposer • bacterium

Decompose: Turn 1 face-up organism in Compost face down on bottom. Give one of your plants +1 Population.

Rapid Recycling: Instead, decompose 2 face-up cards in one activation. Give +1 Population to a plant for each.

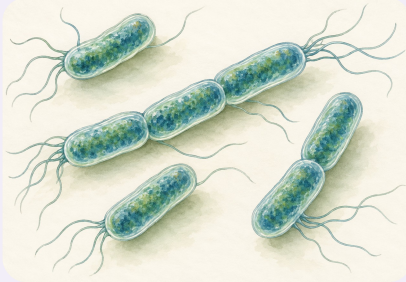

The illustration is a conceptual microscope view, not a photograph.

Soil Bacterium

Bacillus subtilis

Family: Bacillaceae

decomposer • bacterium

Decompose: Turn 1 face-up organism in Compost face down on bottom. Give one of your plants +1 Population.

Rapid Recycling: Instead, decompose 2 face-up cards in one activation. Give +1 Population to a plant for each.

The illustration is a conceptual microscope view, not a photograph.

Native Plant Boom

Effect

Choose one plant you control (any demo Plant). It gains +1 Population, up to its maximum.

Play instead of an organism. Resolve, then put this effect face down on Compost's bottom.

Effect cards never score points.

Compost Addition

Effect

Discard 1 organism card from your hand face up onto Compost. It can be decomposed once.

Play only with an organism in hand. Put this effect face down on Compost's bottom.

Face-up organism cards are the only decomposable Compost.

Common Sunflower

Helianthus annuus

Family: Asteraceae

plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Large Plant: Sunflower may hold up to 4 Population instead of the usual 3.

Pollinators: Monarch, Carpenter Bee. **Herbivore:** Aphids.

Common Sunflower

Helianthus annuus

Family: Asteraceae

plant • flowering

Grow: Spend 1 Light + 1 Water for +1 Population. Repeat while able, up to the maximum.

Large Plant: Sunflower may hold up to 4 Population instead of the usual 3.

Pollinators: Monarch, Carpenter Bee. **Herbivore:** Aphids.
